Snom telephones for the Hotel & Hospitality Industry

Snom telephones have long been used in the hotel and catering industry. However, especially in the area of room equipment, our devices were only ever of interest to a very high-end hotel class and were not really suitable as their range of functions was simply too extensive.

Nevertheless, the hotel and catering sector is very appealing to our value added reseller partners. However, due to the quantities required, this sector is extremely price-sensitive with its own rules and requirements.

Thanks to the expertise of our parent company, Vtech, in this industry, we have been working intensively on this topic and are pleased to be able to present our IP solutions specifically for this sector on the following pages.

HD1xx & HD3xx Series IP room telephones

Whether it's used as a stylish accessory or a practical device – a room telephone must meet different requirements from a classic business device with which we've built our reputation.

From speed dial keys for the most important functions, such as reception, room service or SPA, to quick and easy personalisation, using printed labels or the need for daily cleaning, the hospitality industry has different requirements to the standard business device. The topic of individualisation using logos or colour variants is also often very important in this area.

HDA Series (Analog)

There are still many analogue installations in the hotel sector in particular, especially in guest rooms.

In many cases, it is only worthwhile converting these to IP at great expense when a large scale renovation is due. Snom therefore also offers an analogue telephone series for these special cases. Outwardly nearly indistinguishable from our IP-based end devices, they offer an ideal and elegant solution for every guest room, with customised design if required.

Emergency Telephone (IP & Analog)

Whether on the office floor, in a specialist store, in a hotel corridor or in a school canteen: there are moments when we can't think for long - and shouldn't look for long either. From allergic shock to food to medical emergencies or other potentially dangerous incidents, there are many things that require quick action.

With the Snom emergency telephone, you are prepared. The wall telephone cannot be overlooked - nor should it be.

Simply lifting the receiver automatically dials a stored number - such as reception, emergency services or the internal security centre. Alternatively, predefined speed dialling keys or the keypad can be used to reach specific numbers.

The Snom E303 was developed to make it as easy as possible to call for assistance even in stressful situations:

Traffic red - immediately catches the eye, even for those not familiar with the area.

Slim wall design - fits into any hallway or niche.

Intuitive operation - no time to lose in an emergency.

Whether in schools, confusing sales floors, hotel corridors or canteens: a quick call can be crucial if a dangerous situation is imminent.

E303 (IP)
